About Me

Systems architect with 12+ years of experience designing and shipping software across healthcare, marketplace, and platform engineering domains. I translate complex system designs into production infrastructure — from Java microservices to AI agent orchestration. Proven track record of delivering \$48K+ annual cost savings and reclaiming dozens of engineer-hours weekly through automation and architectural improvements.

Programming

Technical Skills

Emerging Tech

Experience

[Oct 2021 - Jun 2026]

Senior Software Engineer

Care.com

- Architected and delivered automation on critical monolith production deployment pipeline, reclaiming 1+ engineer-week per week and enabling safe, quality deployment of 10-70 commits twice weekly (up from bi-weekly releases of 140+ commits with no automation).
- Delivered \$48K+ annual cost savings via Apache to Akamai subset replatform completed in 2 weeks.
- Led integration of Backstage Service Catalog (Node.js) and SonarQube with associated CI/CD pipelines, establishing platform engineering standards adopted organization-wide.
- Serve as technical anchor for legacy platform knowledge with ownership in rehabbing critical platform features and CI/CD processes for 10-person senior engineering team.
- Drive architectural pattern improvements scaling across multiple teams with strategic bend toward new AI/LLM agentic tooling.

[Nov 2018 - Oct 2021]

Software Engineer III

Angi (formerly known as Angie's List)

- Designed and implemented code-generation templates and developer tooling adopted by delivery teams across the organization.
- Architected RESTful microservice testing framework using Node.js, Mountebank, and Cucumber, enabling CI/CD support via CircleCI.
- Led development of Appium-based mobile testing framework supporting four mobile applications with Python, XCUITest, and UIAutomator2.
- Built and maintained Selenium-based frontend testing framework for microfrontend architecture.
- Evangelized automation best practices through documentation, bootcamps, and organizational support.

[Sep 2014 - Nov 2018]

DV Software Engineer

Roche Diagnostics (Contracted through PRO Unlimited)

- Automated mobile-web-medical-device ecosystem using Java, Appium, Selenium, and Linux bash for FDA-compliant medical device validation.
- Created reusable automation tools using Java, Selenium, PowerShell, and SAS within regulated standard operating procedures.
- Led team automation of test dataset and configuration file generation for medical software verification.

[Mar 2014 - Aug 2014]

Programmer/Analyst

The Stevenson Company

- Developed statistical procedures for quality analysis and data cleaning in market research web applications.
- Migrated SAS programs to MySQL and PHP, improving processing efficiency and code maintainability.

[Jan 2013 - Dec 2013]

Statistical Programmer

STATKING Clinical Services

- Led programming for 20+ Phase I-III clinical trials, developing CDISC SDTM and ADaM datasets in SAS.
- Produced 160+ analysis tables and listings for Phase III clinical trial submission.

Selected Personal Projects

[GitHub: JMoak]

Published NPM Packages

MCP Server Ecosystem

- chrono-mcp**: Production Model Context Protocol server for date/time operations. Dynamically-shaped, token-optimized responses. Published to NPM with 400+ IANA timezone support.
- vibrissa**: JSON-driven MCP integration test runner. Declarative test cases over stdio, CI/CD ready with JUnit output.
- Applied protocol-based architecture and comprehensive documentation patterns (ARCHITECTURE.md, AGENTS.md) from platform engineering to developer tooling.

[GitHub: JMoak]

AI Agent Architecture

LangGraph Multi-Agent System

- Built multi-workflow AI agent platform supporting plan-execute-validate, screenshot analysis, and game automation workflows.

Education

[2008 - 2013]

Bachelor's Degree in Mathematics
Bachelor's Degree in Statistics

Northern Kentucky University
Northern Kentucky University
